

PAVS Model Lifecycle & Delivery Strategy 2026

Streamlined 4-Phase Delivery Model

Phase 1: Enablement → **Phase 2: Performance Analysis** → **Phase 3: Validation**
→ **Phase 4: Optimization**

Time to Market: 4-6 weeks per model

Value Delivered:

- **Model Enablement & Integration:** Rapid deployment of industry-standard AI models with minimal integration effort
- **Performance Analysis:** Identify optimal hardware configurations to reduce infrastructure costs by 30-50%
- **Validation & Quality Assurance:** Ensure models meet accuracy and performance requirements before production
- **Cost Optimization:** Reduce model size and compute requirements while maintaining accuracy
- **Custom AI Solutions:** Adapt models to specific industry needs and proprietary datasets
- **Enterprise-Ready Deployment:** Production-grade packaging with automated updates and documentation

2026 Roadmap: Building Market Leadership

R1 2026 (Q1-Q3): Foundation Phase

- Establish repeatable delivery framework
- Launch public AI model documentation portal
- **Business Impact:** Reduce model deployment time by 70%

R2 2026 (Q4-Q6): Market Entry

- Unified SDK installer for streamlined adoption
- 8 production-ready AI models across key verticals
- Reference applications demonstrating ROI
- **Business Impact:** Enable 3+ customer pilot deployments

R3 2026 (Q7-Q9): Market Expansion

- 8 additional models expanding market coverage
- Advanced optimization for edge deployment
- Robotics simulation environment
- **Business Impact:** Address \$500M+ addressable market

R4 2026 (Q10-Q12): Market Leadership

- 20 production-ready models across multiple industries
- Deployed solutions in Robotics, Healthcare, Industrial sectors
- Scalable training infrastructure for custom AI
- **Business Impact:** Position as top-3 physical AI platform

Go-to-Market Strategy: Open Source & Enterprise Distribution

Multi-Channel Distribution Model

Open Source Community (Market Development):

- **Public GitHub Repository:** Transparent development, community contributions
- **Industry-Standard Platforms:** Distribution via leading AI model marketplaces
- **Automated Quality Assurance:** Continuous validation ensures enterprise-grade reliability
- **Self-Service Documentation:** Reduces support costs and accelerates adoption

Benefits:

- **Market Awareness:** Reach 100K+ AI developers and decision-makers
- **Competitive Positioning:** Establish thought leadership in physical AI
- **Customer Acquisition:** Convert community users to enterprise customers
- **Ecosystem Growth:** Build partner network and integration opportunities

Release Cadence:

- Quarterly major releases with validated performance metrics
- Monthly updates and optimizations
- Real-time issue resolution and community support

Public AI Model Marketplace Strategy

Why Leading AI Platforms?

-  **Global Reach:** 1M+ monthly users searching for AI solutions
-  **Discoverability:** Customers actively seeking physical AI models
-  **Rapid Adoption:** One-click deployment reduces time-to-value from weeks to hours
-  **Credibility:** Marketplace presence validates enterprise readiness
-  **Partnership Opportunities:** Integration with major cloud providers

What We Deliver:

- **Production-Ready Models:** Pre-optimized for cost-efficient deployment
- **Performance-Validated:** Published benchmarks build customer confidence
- **Enterprise Packaging:** Containerized solutions for seamless integration
- **Comprehensive Documentation:** Reduce customer onboarding friction

Competitive Advantage:

- Only platform offering GPU, NPU, and hybrid deployment options
- Superior price-performance ratio vs. cloud-only competitors
- Industry-specific model variants (Healthcare, Robotics, Industrial)
- AMD hardware optimization delivers 2-3x cost savings

Success Metrics:

- Target 10K+ monthly downloads by Q4 2026
- Convert 5% of users to enterprise customers
- Achieve top-3 ranking in physical AI category
