

CALL FOR PAPERS

7th Annual

Global Technical Authors Conference

[GTAC Connect Page](#)

What is GTAC?

The AMD Global Technical Authors Conference (GTAC) is an AMD-internal publication venue open to all of AMD worldwide. GTAC provides a full and rigorous peer-review process similar to external technical conferences and scientific journals, but it also enables AMD engineers to publish on sensitive topics that would otherwise not be appropriate for public disclosure. Papers accepted to GTAC will be published internally for AMDers to read, learn from, and build upon. Moreover, accepted papers will be treated the same as external publications in the context of performance evaluations and promotions. Like many technical conferences, best paper awards will be selected for each of the technical tracks, and the winners will receive company-wide recognition along with financial awards. Submission to GTAC is open to all AMD engineers, including those at or above Fellow/Director levels.

Technical Tracks

When registering a paper submission, authors will select one of the four broad technical areas (Architecture, Shift Left, Software, Technology) and choose additional specific topic(s). We will utilize this information to define a set of balanced technical tracks and then assign papers to the most appropriate track. See the FAQ for more information.

Acceptance Criteria

All submissions will be judged based on typical criteria used by, for example, peer-reviewed IEEE conferences. Each technical track will have a reviewer panel who will judge the submissions based on a combination of novelty, experimental evaluation and results, writing quality, and impact and value to AMD. Note that different technical tracks may weigh each of these categories differently depending on what is appropriate for the focus of the track. The ultimate objective is to judge across all submissions in a Technical Track whether the paper is among the most worthwhile for sharing with and preserving for the AMD engineering community to learn from. If this is your first time submitting to GTAC, we highly recommend that you read a few papers from your technical area in the past years' proceedings.

Best Paper Awards and Recognitions

We will follow previous years' precedents where one best-paper award was selected for each technical track, and one or more additional honorable mention papers will also be recognized and celebrated.

Submission Guidelines, Instructions, and Timelines

All papers are to be submitted directly to the GTAC submission page (<https://gtac26.amd.com/> - will come online soon). Submissions are limited to a four(4)-page PDF including the title, abstract, and figures (references/bibliography are not counted against the page limit), and must be submitted using the Word or LaTeX template provided on the GTAC webpage. Submissions exceeding the page limit,

using an invalid format (for example, we do not accept PowerPoint), and/or modifying the template formatting to increase the effective word count may be administratively rejected without further technical review (this is to ensure fairness across all submissions).

All submissions must pre-register a short 1-2 paragraph summary of the paper by the deadline given below. This is crucial for the GTAC committee to determine the technical tracks and start the process of assigning reviewers to each of the papers. **NOTE: the pre-registration is not the paper submission.** After the pre-registration, authors must still upload the complete four-page paper by the stated deadline. Reviewers will review the full paper. Incomplete submissions consisting of only the pre-registration summary without the corresponding paper will be **automatically rejected**.

Papers should be written in a fashion so that they are accessible to AMD engineers and practitioners. While people working directly in your domain topic area(s) should be able to fully understand your paper, non-experts should also be able to learn something from the paper as well.

Submitted papers will be reviewed using a “**double-blind**” process where the authors’ identities will remain anonymous to the technical reviewing committee and the other way around. Do not include author names or departments/teams in the pre-registration summary or in the submitted paper. “Unblinded” (not anonymous) submissions may be automatically rejected. (Track chairs will have access to author identities for the purpose of minimizing conflicts of interest when assigning reviewers to papers.)

Key Dates:

- Deadline for pre-registration and summary (required) – 6 July 2026, “[Anywhere on Earth](#)” (AoE)
- Full Paper Submission – 20 July 2026, AoE (no extensions will be granted!)
- Expected Author Acceptance/Rejection Notification – Mid-October 2026
- Final “Ready-for-Publication” Manuscript Due – Mid-November 2026
- GTAC Virtual/Hybrid Event Start – Date to be confirmed, targeting early-December 2026

Due to AMD having locations all around the world, we are using AoE convention for setting the deadline, which is also used by the IEEE as a general way to set a deadline in an international context for a variety of their activities. Basically, if the date has not passed literally anywhere on Earth, then you may still submit. This works out to UTC 12:00; read more at this [link](#).

New: Submissions Involving Security Vulnerabilities

If a paper discusses a security vulnerability in a shipping AMD product, the vulnerability must be reported to PSIRT@amd.com prior to submission. The paper must include a section on “Responsible Disclosure” which notes the associated PSIRT ticket, CVE number (if available), and embargo date (if one is assigned by PSIRT). If an embargo date is assigned by PSIRT, the embargo date must be *before* the GTAC event. Papers about security vulnerabilities with embargo dates after the GTAC event will be rejected. **Note:** Security vulnerabilities which were found during pre-production testing and fixed prior to production are immune from this requirement.

FAQs – Frequently Asked Questions

Why are we doing this? With the external publication constraints imposed by the AMD [Author’s Program](#), many papers that might have been deemed “publishable” in the past may no longer be able to obtain proper approvals. However, there still exists a significant desire for and value in AMD’s technical staff being able to share their novel technical contributions in written form, and so we have established GTAC as a venue to support the continued need and desire to publish as well as providing an archival repository of AMD ideas and innovations. In addition to providing a rigorously peer-reviewed platform for these publications, GTAC also opens up the possibility to publish on topics that would not have been publishable even under the “old” Author Program guidelines (for example, on topics closely related to unreleased products or other strategic technologies still under development that would cause material harm to AMD if prematurely disclosed to the public). The development and continued improvement of technical writing skills is a valued part of GTAC and nurturing our engineers’ abilities to effectively communicate in written form is important for helping AMDers advance their careers.

(New for 2026) *Can I use AI?* AMD wants to encourage our engineers to adopt AI tools to increase our productivity. That said, please do not submit 100% AI-generated papers. Authors must take responsibility and ownership of the writing, but our AI tools can be used to help develop the structure and storyline for the paper, improve the quality of writing/spelling/grammar, improve readability, suggest improvements for clarity, help with figures and plots, etc. Reminder: do not use external/public AI tools for any AMD confidential content.

Will there be an in-person event? The first three editions of GTAC were held virtually due to the COVID-19 pandemic. Since then, we have had a hybrid event consisting of the best-paper presenters giving their talks live from Austin. Details for 2026 are still TBD. The key function and purpose of GTAC is to provide an AMD-internal venue for publishing, disseminating, and awarding rigorously peer-reviewed technical manuscripts, and this aspect of GTAC can be realized without an in-person conference or meeting.

Can I submit more than one paper? Yes! One of the great things about AMD is its highly collaborative culture with many engineers working across multiple groups and functions. As such, you may be involved in more than one project that could make for an excellent GTAC submission, and that is perfectly acceptable. All authors listed should have had some well-defined contribution to the paper, which could vary from coming up with the original idea, helping in the generation of analysis of results, or writing a section of the manuscript.

I submitted my pre-registration summary. Am I done? No! The submission has two components. The first is the pre-registration summary that consists of the paper title, author information, and a short 1-2 paragraph summary of your paper. The second is the paper submission itself, which is a four-page document. We use the pre-registration summary to start defining the technical tracks, recruiting reviewers, making reviewer assignments, etc. The reviewers evaluate the full four-page document submission.

How will the papers be published? We have set up a SharePoint-based archive (<https://amdcloud.sharepoint.com/sites/GTAC/>) for all accepted GTAC papers. Due to the sensitivity of the topics covered in some of the papers, the repository is only accessible to AMD full-time employees. Papers from prior GTACs can be accessed there, and future GTAC conference proceedings will be added to this archive as well.

Is GTAC as good/selective/prestigious as [Insert Key Conference or Journal in Your Field]? GTAC has been designed to be as good as, and arguably better than, the standard external conferences. In particular, the technical review and selection committees consist of AMD domain experts from AMD, which represents a far more expert set of judges than one would typically find in an external conference program committee. GTAC has full executive and technical support and recognition as a fully qualified venue for publication in terms of performance evaluations and promotion cases.

Does GTAC replace AMD Asia Technical Conference (AATC), Innovation Showcase, etc.? GTAC serves a different function and is complementary to other exciting AMD innovation-focused technical events. The key focus of GTAC is on the publication model and the archiving and dissemination of its papers. Innovation Showcases and AATC can provide excellent venues for preparing future GTAC submissions. You can and are encouraged to use feedback from these (and other) presentations, poster sessions, etc., to refine and improve your ideas in preparation for writing your best GTAC papers.

Who can submit? GTAC submission is now open to all AMD staff. Contractors and coops/interns may be authors on submitted papers, but there are restrictions on award payouts if their paper is selected as a “Best Paper” winner. In particular, contractors are not eligible to receive cash awards, and coops/interns will only receive a cash award if they are still employed with AMD at the time of the prize payout.

Can I submit a “work in progress”? The intent of GTAC is to serve as a publication venue of the same form, function, and caliber as external peer-reviewed conferences and journals. Like external venues, accepted papers are to be complete scholarly works. However, the concept of “work in progress” applies to the ideation and corresponding evaluation, not necessarily the complete implementation or productization. In particular, the evaluation should be sufficiently complete to allow the GTAC review committee to make a confident judgement of the technical *merit* of the proposal. Whether a specific idea ultimately gets implemented in a product depends on many additional factors beyond technical merit, such as the availability of execution resources, schedule impact, business priorities, etc. To

put it another way, if the AMD Author's Program was not modified with tighter restrictions to further protect AMD's IP and competitive advantages, would your paper submission be sufficiently well developed to be accepted/acceptable for an external conference or journal?

Can I submit a GTAC paper based on an external paper that I've already published? It depends. The GTAC evaluation criteria include novelty, and a more-or-less identical submission would not teach anyone anything new beyond the already-published paper. However, if the GTAC submission contained *additional* novel contributions or significant depth, then it could be a reasonable GTAC paper. One example could be that additional implementation details, optimizations, results, and analysis were originally omitted from the externally-published paper because of AMD confidential material, AMD Author Program traffic lights, or other business concerns. In such cases, the authors should cite the already-published work and include a footnote indicating that this GTAC submission is an extension/expansion of that existing paper and clarify what aspects are new to this GTAC submission.

Is there anything else I can't submit? GTAC is intended to cover all technical topics of broad business relevance to AMD, but business and other considerations may restrict certain topics. For papers related to the semicustom customers, third-party need-to-know NDA provisions, etc., it is the responsibility of the authors to ensure that the submission does not break any terms of the relevant NDAs (please keep in mind that GTAC reviewers might not be covered by the same set of NDAs as the authors of a paper!). Papers with material covered by export-control regulations or restricted by government contracts must likewise remain in compliance with all related regulations. Note also that survey papers, position papers, and other submissions without novel technical content are less likely to be competitive. If in doubt, ask your manager and/or the GTAC organizers!

I've got business-critical deadlines! Can I get an extension? No extensions will be granted to ensure fairness to all authors. The deadlines have been roughly the same every year, and therefore prospective authors should be able to plan their submissions well ahead of time.

Can I patent the ideas in a GTAC paper? Can I submit a GTAC paper on an idea I've already patented? Yes! Novelty is a common criterion for both GTAC and patents, and so we highly encourage authors to also submit one or more invention disclosures to help AMD protect the innovative intellectual property described by their GTAC submission. Text and figures can provide a great prefetch for putting together an invention disclosure. Similarly, if you've already patented your idea (but have not otherwise published it), you can submit a paper about it to GTAC, although if the patent is already several years old, that may impact its novelty assessment.

Can I still submit to external conferences? Yes. Acceptance to GTAC does not preclude submission to an external conference, journal, or other public venue. However, such a secondary submission **MUST** undergo the normal [Authors Program](#) review process and have any sensitive/competitive content removed (see next question).

Do GTAC papers need to go through the AMD Authors Program? No! GTAC papers are for internal consumption only and are not to be made public, therefore an Author Program review cycle is not needed. If authors wish to take their GTAC paper to create a new submission to an external conference, journal, etc., then *that* submission must go through the normal [Authors Program](#) review process as usual.
